Someone could help me? A: I found an article on manual installation Basically this gives you the installer, once installed you can drag the entire Indesign folder to your Applications folder. Note: you need to install Mac OSX Lion (and this is not a certified Mac OSX version) Q: How to delete log file on webapp I have build Spring boot application and created properties file to control logging details. But I see all log messages(actually error) in browser. But actual messages are stored in /logs/prod.log file. I want to delete that log file as it is consuming much of space on hard drive. First, you need to setup your logback logging to use external file or be less verbose by rolling over on itself. To do that, on your pom.xml add the following configuration : 82157476af
